1. The Course Goals

Many students take this course because it is required for their degree. But there are better reasons than that!

In *College Algebra* (MA 15300), *Trigonometry* (MA 15400), and *Precalculus* (MA 15900) you will:

- Highlight the link of mathematics to the real world.
- Develop a wide base of mathematical knowledge, including
  - basic skills and concepts,
  - a functional view of mathematics, including graphical, algebraic, numerical, and contextual viewpoints,
  - properties and applications of some of the basic families of functions
  - geometric visualization,
  - problem solving, predicting, critical thinking, and generalizing.
- Incorporate the use of general academic skills such as
  - communicating mathematics concepts,
  - understanding and using technology, and
  - working collaboratively.

The above aligns with the foundational intellectual skills for quantitative reasoning in the [Indiana General Education Core](https://www.pfw.edu/academics/general-education/) and is based on the guidelines of the Mathematical Association of America’s subcommittee, [Curriculum Renewal Across the First Two Years](https://www.pfw.edu/academics/general-education/) (CRAFTY).

2. General Education Course Learning Outcomes

*College Algebra and Trigonometry* addresses all eight outcomes in Area 2: Quantitative Reasoning of the Indiana General Education Core (listed below). Through hands-on activities and assessments you will

- create and interpret mathematical models to solve problems presented as real world situations,
- formulate, validate, and analyze solutions to problems using mental, paper and pencil, algebraic, and technology-based techniques as appropriate
- utilize graphing calculators to find the solution to problems which cannot be solved by pencil and paper, as well as explore mathematical patterns and visualize mathematical ideas,
- recognize and cite assumptions made in real world problem solving, and
- communicate your reasoning.

### Indiana General Education Area 2 Quantitative Reasoning Competencies

<table>
<thead>
<tr>
<th>Interpretation</th>
</tr>
</thead>
<tbody>
<tr>
<td>3.1. Interpret information that has been presented in mathematical form (e.g. with functions, equations, graphs, diagrams, tables, words, geometric figures).</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Representation</th>
</tr>
</thead>
<tbody>
<tr>
<td>3.2. Represent information/data in mathematical form as appropriate (e.g. with functions, equations, graphs, diagrams, tables, words, geometric figures).</td>
</tr>
</tbody>
</table>

<table>

</table>

<table>
<thead>
<tr>
<th>Communication</th>
</tr>
</thead>
<tbody>
<tr>
<td>3.8. Clearly explain the representation, solution, and interpretation of the math problem.</td>
</tr>
</tbody>
</table>

See [https://www.pfw.edu/academics/general-education/](https://www.pfw.edu/academics/general-education/) for more information about the Indiana General Education Core.
3. Study Time Outside of Class

This course requires a solid effort. In a Fall or Spring Semester 16 week course, the faculty at PFW expect you to study a minimum of 6 hours a week outside of class working on mathematics for MA 15300 or MA 15400 and 10 ten hours per week for MA 15900. This pace is accelerated in the summer sessions and for 8 week courses.

4. Accessibility and Accommodations

If you have a disability and need assistance, special arrangements can be made to accommodate most needs. Contact the Director of Services for Students with Disabilities (SSD). They are located at Walb Student Union, Room 113, telephone (260)481-6658, as soon as possible to work out the details. Once the Director has provided you with a letter attesting to your needs for modification, bring the letter to your instructor. For more information, please visit the Web Site for SSD: pfw.edu/ssd/.

5. Prerequisite Skills

MA 15300, MA 15400, and MA 15900 are intended for students who have completed two years of high school algebra. The prerequisite for MA 15300 or MA 15900 is completion of Intermediate Algebra MA 11100 with a B- or higher or placement by departmental exam. The prerequisite for MA 15400 is MA 15300 with a C- or higher or placement by departmental exam. Look at the kinds of problem at the Websites below. If they do not look familiar, perhaps you need to drop the class and take either the prerequisite Intermediate Algebra MA 11100, or even a course lower than MA 11100.

MA 15300: See the MA 15300 Course Website
MA 15400: See the MA 15400 Course Website

6. Graphing Calculators

Graphing calculators are used for activities and assignments in and out of class. The TI-83 Plus or TI-84 Plus is strongly recommended. You may use another equivalent calculator* but you will be responsible for understanding how to use it. Your instructor will be most familiar with the TI-83/84 or TI-83/84 Plus and may not be able to offer you help with other calculators.

*Your calculator should have features which enable you to find intersection points, zeros (or roots), and maximum/minimum points of graphs. If you have questions whether your model of calculator is allowed, ask your instructor.

Graphing Calculator Loan Program: You can rent a TI-83 Plus or TI-84 Plus for the semester for a nominal fee from the Purdue University Fort Wayne Students' Government Association, located in the Walb Student Union Room 225, Telephone 260-481-6586. Supplies are limited and are usually depleted the first week of classes. However, some students may have dropped a class which requires a calculator so one could just be sitting here on a shelf waiting just for you. More information is HERE.

7. Internet Resources and your PFW Computer Lab Account

Student-access computer labs are located around campus. For a complete list, go to the Information Technology Services Website HERE. To use the computers in these labs you must have an activated PFW computer Lab Account, which you received when you enrolled in PFW. For assistance contact the Help Desk at Kettler 206 or email helpdesk@pfw.edu.

8. e-Homework (eHW)

Great news! The Web-based electronic homework system (also called Möbius) will immediately grade your answers and will provide worked-out solutions.. It is only $15 for an entire year’s worth of access. You will use it for all of your graded work.

Need Help?
Once you are logged in, click on the word Help near your name on the top of the screen to access online help. You can also check out the Möbius Support Site for help, where you can type a topic in the search box or peruse the popular choices on the page. In addition, you can e-mail ehwtechsupport@pfw.edu for troubleshooting. It will be helpful if you can describe the problem in as much detail as possible or provide screenshots.

Getting to the eHW Site
To access eHW, click HERE.
This link is also reachable from the Math Department page at pfw.edu/math under e-Homework on the far right pane.
Already Have an Account?
If you have already had previous access to Möbius, enter your email and password to login. If you forgot your password, click on the words Forgot your password. You will be prompted for the email for your account, to which a system generated password will be sent. Once you login again you can change it by clicking on your name in the top right corner and then click on Password Update.)

Need an Account or License or Enroll in a Class?
If you have not already had previous access to Möbius, click on “Create an account.” For detailed step-by-step instructions on how to create an account, enroll in a class, and purchase a license, click HERE.

Your Work Is Automatically Saved
All of your work is saved up until the last question you were working on, so in case the Internet connection goes down, you have not lost your previous work. You do not have to complete an assignment in one sitting.

How to Submit an Assignment
Be aware that Submit Assignment behaves differently than Quit & Save. After you complete an electronic homework assignment, the only way for your instructor to receive your grade is if you click on the first button, Submit Assignment. Your work will be instantaneously graded and you will see your score. You would click on the second button, Quit & Save, to return to the assignment to work on it later. If you can see it in your Gradebook link, your instructor can see it as well.

If a time limit is set for a quiz or test, then it counts down from when you started the assignment. If you close your browser (or use the Quit & Save button) before clicking on Submit Assignment, the timer will continue to count down.

How to See Worked Out Solutions
To make the most out of eHW, try the assignments as many times as you can. Use “Just for Practice” sets to see worked out solutions of problems that are similar to those on your assignment. Use the “Flash Cards” to hone in on particular learning outcomes.

Questions with Multiple Parts Presented One at a Time
Some questions may be delivered to you one part at a time, such as the one shown below. After you enter your answer, click on Verify to move to the next part.
In some questions, the correct answer to the first part of the question may display before you enter the answer to the next part.

After clicking Verify, part (b) of the question will display.

Be sure to complete all parts of the questions.
**How to See Your Grades and Past Results**
Throughout the semester, you may wish to look at the questions and solutions of past eHW assignments that you completed. The highest score on your assignment appears on the eHW homepage, but you can see all graded attempts by clicking on the link Gradebook > View Past Results.

For more on using the Gradebook, see the online help by clicking **HERE**.

**Working with Math in Responses**
You enter formulas using standard mathematical notation similar to that used in a graphing calculator, following the rules for standard order of operations. Some helpful tips follow for entering responses.

**Avoiding Common Math Errors**
1. **Exponents**: Use the caret, ^, for exponentiation, and the letter e for 2.718...
2. **Parentheses**: As on a graphing calculator, you must use parentheses. When in doubt, you can use the Preview option to see it look the way it would in a math text.
   **Examples:**
   For $\frac{x}{13}$, you must type $2^{\frac{x}{13}}$
   not $2^x/13$ . . . which would be interpreted as $\frac{2^x}{13}$

   For $y = \frac{x}{4(x-2)}$, you must type $y = x/(4(x-2))$
   not $y = x/4(x-2)$ . . . which would be interpreted as $\frac{x}{4(x-2)}$

3. **Multiplication**: You can type an asterisk (i.e. *) for multiplication, or just type a letter and a number together (i.e. $2x$).
4. **Square Roots**: The square root function is sqrt(x) or you can just type $x^{1/2}$ or $x^{0.5}$ instead.
   Note again that, like on a graphing calculator, $x^{1/2}$ means $\sqrt{x}$.
5. **Absolute Value**: The absolute value function is abs(x), so something like $2|x+1|-3$ would be typed as $2abs(x+1)-3$.
6. **Argument of Functions**: You should always place the input of a function in parentheses. For example, for $\sqrt{3x}$ you must type $\sqrt{3x}$,
   not $\sqrt{3x}$ which would be interpreted as $\sqrt{3} \cdot x$

For MA 15400 or MA 15900 students especially:
7. **π**: Simply type Pi or pi. (However, not PI.)
8. **Trigonometric Functions**: The names for common mathematical functions (sin, cos, etc.) are just what you would expect. The inverse trig functions are arcsin(x), arccos(x), and arctan(x). Also, trigonometric functions are all set to work in radians.
**Using the Preview Option in Responses**

Use the Preview option to view your response as a typeset mathematics expression. Preview demonstrates how the system interprets your entry (inspecting it for misplaced parentheses and other unintended keystrokes).

For example, suppose you were to type $\sqrt{179} + \frac{3}{\pi}$ in the box. (Note that this is incorrect.)

After clicking Preview, you can correct your response before submitting it for a grade.

**Order of Operations**

Order of precedence is as follows:

- Parentheses
- Exponents
  - Multiplication and Division (from left to right)
  - Addition and Subtraction (from left to right)

For example, if you were to compute $\frac{8423}{423}$, multiplication and division outrank addition, but multiplication and division are the same rank.

\[
8 \div 4 \times 2 + 3 = \frac{8}{4} \times 2 + 3 = 4 + 3 = 7
\]

Notice this is what you would obtain from a graphing calculator:

Rules for order of operations are necessary so that a unique value results. Consider the following:

\[
8 \div 4 \times 2 + 3 \neq \frac{8}{4 \times 2} + 3 = 1 + 3 = 4
\]

\[
8 \div 4 \times 2 + 3 \neq \frac{8}{4 \times 2 + 3} = \frac{8}{11}
\]

\[
8 \div 4 \times 2 + 3 \neq \frac{8}{4 \times (2 + 3)} = 2 \times 5 = 10
\]

Parentheses outrank all operations. If your intention is to have $\frac{8}{4 \times 2} + 3$, the fraction bar serves as a grouping symbol.

The expression $\frac{8}{4 \times 2} + 3$ is equivalent to $\frac{8}{(4 \times 2)} + 3$.

So if our intention is $\frac{8}{4 \times 2} + 3$, we need parentheses: $\frac{8}{(4 \times 2)} + 3$. 

TIP: Some students use the mnemonic:

Please Excuse My Dear Aunt Sally
**Nested Parentheses**

To computers and graphing calculators, brackets such as [ or ]
or braces such as { or } are not equivalent to parentheses.
For example, to enter $3^{2/(x+1)}$ you would type $3^{2/(x+1)}$
as opposed to $3^{2/[x+1]}$.

**Rules for Rounding**

Standard rules for rounding numbers apply. For example, suppose we are rounding the following calculations to two decimal places. Look to the right of the rounding digit, which we have underlined.

<table>
<thead>
<tr>
<th>$1.12^2$</th>
<th>1.2544</th>
</tr>
</thead>
<tbody>
<tr>
<td>$1.12^8$</td>
<td>2.475963176</td>
</tr>
<tr>
<td>$1.12^{41}$</td>
<td>104.2170869</td>
</tr>
</tbody>
</table>

If it is 4 or lower, we truncate. So to two decimal places, $1.12^2 \approx 1.25$

If it is 5 or higher, we round up. So to two decimal places, $1.12^8 \approx 2.48$

and to two decimal places, $1.12^{41} \approx 104.22$

What is $1.12^{23}$ to two decimal places? Since the digit to the right of the rounding digit is 2, we have $1.12^{23} \approx 13.55$.

Your calculator mode can be helpful to report answers to a selected number of digits. However, use caution when doing so! It is easy to forget to change it back to FLOAT and report incorrect results when you need more precision.

<table>
<thead>
<tr>
<th>$1/8$</th>
<th>0.13</th>
</tr>
</thead>
<tbody>
<tr>
<td>$1/8$</td>
<td>0.125</td>
</tr>
</tbody>
</table>
9. **Help!**

So you're working your hardest, doing the assignments, studying every night, but it's just not enough?

| **Suggestion 1:** If you have purchased the book, read it carefully. Again and again. |
| **Suggestion 2:** Do lots of individual homework. Understanding material in later chapters typically requires that you understand concepts in previous ones. |
| **Suggestion 3:** Recopy your notes. |
| **Suggestion 4:** Problem solving requires persistence. If you don’t understand something the first time, you’re in good company. Even Einstein had trouble and said, "Do not worry about your difficulties in Mathematics. I can assure you mine are still greater." Don’t just give up. Take a break and come back and try again! |
| **Suggestion 5:** Remember, there’s no substitute for daily preparation. Get help as soon as any problems arise. Which takes you to the second column of resources… |

| **Resource 1:** Talk to your instructor. Use the office hours. |
| **Resource 2:** Use the features of eHW, including viewing the details of worked out solutions, the Just for Practice homework sets, and eHW Flash Cards. |
| **Resource 3:** If you can, connect with other class members outside of class and do your homework together. |
| **Resource 4:** Use the free tutoring offered [HERE](#). |
| **Resource 5:** Use the Web, starting first with the Internet resources listed in this handout. |
