Course                                    ECE 31300 – Energy Conversion Laboratory
Type of Course                           Required for EE program
Catalog Description                      Laboratory experiments in energy conversion including operation, testing, and applications of energy conversion machines including AC and DC motors and generators; experiments on magnetic circuits and transformers
Credits                                   1
Contact Hours                            3
Co-requisite Courses                     ECE 32400

Prerequisites by Topics                  Basic understanding of AC and DC analysis of circuits, the design and analysis of basic electronic circuits, frequency response of circuits, power concept, and electromagnetism.

Textbook                                  Laboratory Experiment Notes

Course Objectives                         This course will provide a basic understanding of magnetic circuits and their losses, single and three phase transformers, including voltage regulation end efficiency. Energy conversion principles, analysis and understanding of generators and motors will be discussed. Application of these concepts for dc and synchronous machines will be demonstrated. Their application to energy sustainability is also discussed. Several projects are included in which students design, simulate, build, test, and report on their findings.

Course Outcomes                          Students who successfully complete this course will have demonstrated:
1. An ability to solve magnetic circuits, three phase and single phase circuits \( (a,e) \).
2. Understanding of operational principles of transformers. Be able to calculate voltage regulation, and efficiency \( (a,b,e) \)
3. Understanding of operational principles of synchronous machines. Be able to calculate speed regulation, and efficiency \((a, b, e)\)

4. Understanding of operational principles of DC machines. Be able to calculate voltage regulation, speed regulation and efficiency \((a, b, e)\)

5. An ability to use statistical methods and computer software to process experimental data \((a, k)\)

6. An ability to write formal technical report and perform oral presentation to convey engineering message efficiently \((g)\)

**Laboratory Topics**

1. Magnetic circuits and transformers: Transformer operations, connections, equivalent circuits, testing and practical use.
2. Alternating current machines-operation, testing and practical use.
3. Synchronous machines: Operation, excitation, equivalent circuits, testing and practical use.
4. Direct current machines: Operation, connections, equivalent circuits, control and applications.
5. Single-phase machines-special machines and applications
6. Three Phase power

**Computer Usage**

High

**Laboratory Experience**

High

**Design Experience**

High

**Coordinator**

Abdullah Eroglu, Ph.D.

**Date**
