

**INFORMATION TECHNOLOGY POLICY COMMITTEE
POLICY ON USE OF STATE APPROPRIATION FOR TECHNOLOGY**

Eligible Expenditures	State Technology funds can be used for any goods and services which fall within a broad definition of "technology" and which would advance teaching and learning. Care should be given in making commitments for expenses that will recur beyond the duration of this funding.
-----------------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

- Priorities** In allocating State Technology funds, the following principles should be followed:
- Preference should be given to projects which broaden the educational opportunities available to IPFW students.
 - For projects directed at improvement of current academic programs, preference should be given to projects offering benefits to the largest number of students.
 - Preference should be given to technologies consistent with existing campus infrastructure and support systems.
 - Preference should be given to proposals for which matching or school/department funds are available.

Annual Review	If funding is provided in future budget years, experience with the policy should be considered before project proposals are invited.
